

IVM Fenders

IVM Fenders are the modified version of the Element fenders, they have higher deflection capacity and accordingly provide higher energy absorption.

“IRM” IVM Element Fenders is the modified version of the Element fender, which has the highest deflection capacity and accordingly provides higher energy absorption. They are quite similar to the IV type Element Fender. They are generally used in pairs and can be used in various combinations to optimize the performance of the Fendering system. The overall characteristics, features, and properties of IVM Element Fenders are similar to other Element Fenders and especially IV type Element Fenders.

- **Modular arrangement of fixing multiple fenders**
- **Equipped with unique rubbing boards to reduce the friction and avoid sparking**
- **Long-life, maintenance-free**
- **Recessed fixings**
- **High-performance profile**
