

## Pipeline Components

Borosilicate glass 3.3 pipeline offer many advantages for its use in chemical, pharmaceutical industries together with precious metal refining, dye works & electroplating because of its following characteristics.

Inert to almost all chemicals, hence no risk of contamination and no unwanted flavors or colours are imparted into product. Transparency allows visual monitoring of the process, flow patterns, colour changes etc. Almost universal resistance to corrosion. A long service life is guaranteed. Smooth surface permits easy cleaning and prevents fouling.

All the components are suitable for operation under full vacuum conditions.

Pipeline Components are available from DN 15 to DN 600. DN 800 pipeline parts are available on request.
