

Chamber Machines

Closed Chamber Machines

The product to be packed is filled in the nylon barrier or multilayer film based pouch and placed in the vacuum chamber. Once the lid is closed, the vacuum pump which is inbuilt in the machine starts the process of vacuuming the total chamber in which the pouch filled with the product also gets vacuumed.

The machines are provided with two inbuilt Sealer for higher productivity. Options available in this machines are gas flushing, PLC based system, Fully stainless construction, bellow type sealing depending on moulds, castor wheels etc.

Double Chamber Machines

The product to be packed is filled in the nylon barrier or multilayer film based pouch and placed in the vacuum chamber. Once the lid is closed, the vacuum pump which is inbuilt in the machine starts the process of vacuuming the total chamber in which the pouch filled with the product also gets vacuumed. The machines are provided with two inbuilt Sealer for higher productivity. Options available in this machines are gas flushing, PLC based system, Fully stainless construction, bellow type sealing depending on moulds, castor wheels etc.
