

Melting Furnaces

With diligence, our reliable and quality oriented organization has been engaged in providing Gold Melting Furnace. For the purpose of manufacturing of these products as per industry laid norms, we make use of latest technology and cutting-edge machinery. These products are used in melting gold raw ore into ingots, bars, and lumps.

The aluminium melting furnace is made out of mild steel casing and coated with two coats of heat resistance Aluminium paint. The inner chamber will be built with the combination of lightweight refractory bricks & ceramic blanket. Suitable Crucible base will be placed at the bottom of the furnace to take the crucible load along with molten metal.
