

# Industrial Ovens

## Description

Industrial ovens are usually large in size and used for preheating and drying production batch material. An Industrial drying oven is mostly used in industries related to electronics, semiconductor, polyurethane, polymer, rubber and pharmaceutical etc. With digital temperature controller, air blower unit and heaters they generate heating environment required for drying, aging, annealing or curing applications.

We are making cost effective though high performing industrial ovens for over 30 years. Standard ovens are equipped with digital temperature controller, air blower unit and tubular air heaters. Depending upon applications, these ovens are provided with wire mesh cable trays or movable trolley with in-built racks.

We also make industrial ovens with customized chamber size at economical price as per customer's specific requirements.

## Chamber Size & Temperature Ranges

The chamber size is custom built as per the requirement of the customer. The Temperature Range varies up to **400°C**.
