

Silent Chains

We offer a range of Silent Chains that have high tensile teeth set on the links to engage itself with the sprockets with less impact or sliding. This ensures that there is minimum vibration and noise generated.

PIV Chains on the other hand are appreciated for their unique designs and high-speed performance. It ensures successful transmission without any slippage.

Our range of chains is widely demanded in various industries such as automobile, engineering, processing machinery and textile machinery. These also find usage in gear boxes and drive chains.

Our range of chains is appreciated for the following salient features:

- Superior quality
- Perfect finishing
- Durability
