

Scissor Lifts

Description

Scissor lifts are machines which are mainly used to move the material or operators in vertical direction. They are simple in design include linked & folding supports, hydraulic cylinders, base (platform) and sometimes customized frame structure on top base.

Jaycee Scissor lifts capacity ranges from 50 Kg to 50 Tons. Hydraulic cylinders power the system to lift heavy loads.

Types Of Scissor Lift:

- Portable Scissor Lift
- Stationary scissor lift

Applications:

- Automobile industry to lift the vehicles for testing, inspection, servicing, assembly etc.
- Construction industry to supply material, inspection, etc.
- Electrical industry, Telecommunication Industries, Tower maintenance, etc.

Our Scissor Lifts are the industry solution for increasing work site productivity. It is used in many industries i.e. Construction, Automobile, Service industry and many more.

Scissor lifts can handle any application requiring a ladder or tower. Scissor lifts allow operators to complete the same jobs more easily and efficiently without the setup time of other equipment, such as ladder or a tower, and without a ladder's dangerous instability..
