

# Articulated Arm

## Description

Articulated arms are used for variety of applications like tool handling, machining job handling, tool balancing, also used for special purpose machines. They're ideal for supporting tool balancers, air balancers, hoists, vacuum lifters and welding wire feeders. And they can handle up to 360° rotation when pillar mounted.

### Types of Articulated Arm:

- Pillar Mount Articulated Arm
- Overhead Mount Articulated Arm

Jaycee provides the standard as well as customized articulated arms as per the customers' applications needs. We supply articulated arms with a capacity of between 10 and 400 kg. Articulated arms provide effortless handling and quick accessing of heavy tools and other components. Compact and robust design of arms makes Jaycee to stand among top material handling providers in India and all over the world.

Articulated arms are available in various structural types. We develop the products considering all the factors of workplace (i.e. Space available, Base/ floor data, working feasibility, economic factors, durability, etc.). Jaycee aims to provide advanced material handling solutions to improve their productivity, increase efficiency of workers, empower workplace, improvise working conditions, etc.
