

Drive Chains

RMEI Drive Chains are specially designed and manufactured to provide excellent service in severe working conditions. Our chains are manufactured to close tolerances with the most modern equipment in the industry.

Each component is made from high-quality steels and then specially heat-treated to provide maximum performance and long wear life. Joint parts are hardened to provide greater strength and wear resistance. Sidebars are hardened to achieve ultra-high strength throughout.

RMEI Drive Chains are also used to replace combination chains when installations are modified to handle heavier loads or operating conditions become more severe.

- Pitch: 63.50 MM To 102.45 MM,
- Breaking Load 13000 kgs To 94000 kgs (Chains length are preloaded 1/3 of breaking load)
