

## Storage Tanks

Grace <sup>TM</sup> [Rangoli] has always offered high quality corrosion resistant Storage tanks for the process plants industries.

These storage tanks are manufactured, Fabrication and moulded from the combinations of various types of resin, thermoplastic liners and glass fibre reinforced plastics (Dual Laminates) like PP/FRP, PPH/FRP, PVC/FRP, CPVC/FRP, PVDF/FRP, FEP/FRP and PFA/FRP. – FRP (FRB, FRV, FRSV) Moulded. Storage tanks.

We are manufacturing a wide range of contact moulded tanks using state-of-the-art equipments and technology with the use of quality raw material. These tanks can be offered in various types like vertical cylindrical, horizontal cylindrical, rectangular, round ends and flat ends.

Tanks have optimum hoop-to-axial ratio with longer service life unaffected the cost of supply. Being much lighter and with high strength-to-weight ratio, tank's transportation, handling and installation easy and cheaper. These tanks have better die-electric property and low thermal conductivity.

We are offering the capacity of the storage tanks up to 200 KL and size ranging from 600mm to 6000mm in diameter and up to 15000mm in length.

Besides the products manufactured to our standard design parameters, patterns and sizes, we can meet all custom built requirements as per the special constructions and shapes with the customer's choice of dimensions to suit their availability of the space.

Higher capacity and over dimensional tanks and equipments shall be moulded and fabricated at site locations thus eliminating the transportation difficulties and risk of damages.
