

Soya-Puff, Kurkure Machines

Product Description

Application

Ahamad Associates Plant and Projects offers Soya –puff Machines Or Kurkure Extruder Machines which are widely used in the industry to make corn curls, Puffs and Snacks. These machines can produce kurkure corn curls, Cheetos snacks and puffs, Nik Naks, Cheese puffs or curls, etc. The extruder snacks or kurkure are made by the extrusion process and are very crunchy and great in taste, The Kurkure making Machine processes flour to produce these extruded snacks.

Our supplied all the snack food making machines are made from high grade material and comply with all food standards. In the Kurkure Making Machine in Bareilly U.P, the corn meal is moisturized in the flour mixer and fed to the rotary extruder where due to high pressure and temperature from the screws the flour gets heated and dried and after cooling and seasoning the kurkure curls are ready for packaging.

Delivery

Within two to six weeks after order is placed.
