

Attritor

We fabricate Attritor Mills which are also known as Stirred Mills and are manufactured from superior grade steel that incorporates high efficiency in the machine. These are used in grinding and blending process for wet or dry materials. Our product range is equipped with a top cover that can be used to lock the main vessel with following features:

Attritor mills are compartmentalized into two halves i.e. mild steel jacket which is used as coolant and an entire M.S Inlet, outlet and drain fitting

Specifically designed stainless steel ball valve and strainers provide corrosion resistance and make these easily cleanable equipment

In addition, these also have optional recirculation facility
