

Bifurcator Fans

Bifurcator fans are ideal for exhausting or recirculating gases, fumes and hot air from the industries. Bifurcator fans are direct driven tube-shaped axial fans, where the motor is encased in a central pod to isolate it from the airflow.

Manufactured to the highest quality from premium steel, the range is available for normal and high-temperature applications. Our bifurcator fans deliver a broad selection of air performances, including high-pressure equipment. The Bifurcator Axial Fans have been specifically designed to meet the need for an axial fan that can handle atmospheres normally different from the life of the motor of the fan. Bifurcator Axial Fan range accessories are available which include: Wire Inlet Guard, Axial Ancillary Pack, Coupling Flanges, Mounting Feet, AV Mounts and Speed Controllers.
