

## Damper

Industrial Dampers are critical equipment in various places of the ducting system from the boiler to the chimney. They can be used for isolation or flow control. Different designs can be used to give 100% seal tightness for man-safe operations.

We offer the design and manufacture of fabricated dampers for industrial service. For everything from industrial ventilation to heavy duty pollution control, our dampers are the perfect fit.

With extensive experience, our production team can solve your damper problems from lightweight industrial ventilation to high temperature, high pressure industrial process applications.

### **Dampers are designed on the basis of:**

- Design and Operating values of the medium temperature, pressure and flow rate
- Composition and nature of the medium flowing in the ductwork
- Dust content in the medium
- Special requirements with regard to installation
- Space availability etc.
