

|| Vibrating Screen ||

The Vibrating Screen is used for separation of material in various sizes (as per your requirement). The rotary screen and vibrating screen are used for the same purpose. However, for higher capacity and accuracy of product material, the vibrating screen is necessary. The vibrating screen is normally manufactured with one deck to five decks, and the size depends on the capacity per hour.

SPECIFICATION

Body	: M. S. fabrication , both side plate 8 mm thick M. S. Plate.
Shaft	: EN- 9 material.
Bearing	: Double Row Spherical roller bearing(SKF Sweden).
Bearing Block	: Steel Casting.
Screen	: Screen Steel wire as per IS-4454(Part-1, Gr. 1 of 1981.the screen complete with M.S edge.
RPM of Machine	: 1000 to 2800.
RPM of Motor	: 1500.
Size of Screen	: The size of screen are used the capacity of the project or Machine or how need material are necessary in per hour/ day.
No. of deck	: The deck are depend how many size of material are necessary.
