

## Valves

### Quick Coupling Arrangement

The arrangement as shown acts as a self actuating coupler. The valve is spring loaded and normally it keeps the valve pressured against the seat, thus remains closed when the pressure gauge pushed to the coupler the valve remain pressed against spring thus opening the seat & clears the air passage to pressure gauge which will be in operation. Air passed stop on removing the gauge.

#### Air Flow Measuring Valve

(Please scroll down to see details)

#### Quick Coupling Arrangement

#### Salient Features

It makes the gauge quickly to fit & remove.

No tools are required to fit & remove the gauge.

No isolating valve is required.

Easy to handle.

It is safe as chance of air leakage is remote.

It keeps the gauge safe from any damage.

## Stop Valve

Owing to our team of highly qualified and knowledgeable engineer,we have been to offer our clients Globe Valve.Our professionals manufacture this valve keeping in mind the standard and parameter as per customer require. Our major markets are USA and European Countries.

## Gauge Cock

## Steam Valves

We have with us a range of Steam Valves that are manufactured using premium grade raw material. Engineered with precision, these steam valves are used to regulate flow in various steam lines. Designed in compliance with international standards, our range is appreciated for its sturdy construction, optimum performance and low maintenance. These can be availed in varied specifications to meet diverse application needs.

## Check Valves

We offer a qualitative range of Check Valves that are used for regulating flow in any non corrosive fluid line. Designed with precision, these valves are appreciated for their application specific design, high performance and long service life. Our range is available in different sizes and dimensions to suit variegated choices of clients. In addition, we also quality test our range to meet the international quality standards. Our major markets are USA and European Countries.

## Relief Valves

We are one of the well known manufacturers and suppliers of a different range of Pressure Relief Valves. These safety and pressure relief valves are spring loaded right angled valves. They are widely used in the pressure vessels, pipelines and reactors for controlling the excess pressures. When the pressure exceeds the set point then the valves can open and close automatically as per the pre-setted pressure ratios. This further, promotes the safety of the capital equipment.
