

Incubator

Cooltronics is using single stage incubator concept that offers entire range of setters and hatchers for chicken, turkey and ducks. The incubator is fully controlled by PLC and having a capacity ranging from 17280 chicken eggs and above. Incubator consists of control system, trays and trolleys.

Cooltronics offer the best quality single-stage incubators and hatchers in the market. Flexible to the requirements of every client, our devices feature excellent technology that combines very outstanding hatch results with effective procedures and easy management.

- **Single-stage incubators**

The Single stage incubator is a contemporary range of single-stage incubators that sets a new level in incubation. It improves breeding performance by enhancing hen quality and quantity. Adding to that, it minimizes energy, maintenance, and labor expenses. The new C-line offers the long-anticipated answer to breeding places hoping to boost their economic benefit.

- **Control systems**

Programmable Logic Controller- minutely record and regulate all Plan size of hens concerning the size of the batch of eggs. A batch of eggs is the total number of eggs laid on a particular day by one brood in one farm.
