

H-Frames

Features of H-frame shuttering Scaffolding:

- Consists of the rigid welded frames of two verticals and two horizontals.
- The frames are interconnected by scissor cross braces in all bays or alternate bays (for top 20 Mt.) of scaffolding through pins welded on frames and locked in position by split pins.
- Cross braces are available in different sizes to match frame spacing.

Applications of H-frame shuttering Scaffolding on hire:

- Construction of a new building
- Construction of bridges
- Renovation of a building
- Painting work of an old building
- Maintenance of a building
- Ground Events
