

Concrete Bucket

Description

Concrete Bucket extensively used for its quality standards. Designed using finest quality raw material this bucket is used to carry ready concrete mixer from one place to another place within the construction premises. Concrete Buckets are built for modern concrete requirements and general concrete work. Sturdy design and construction provides long life expectancy. Concrete buckets help deliver concrete on a specific site of a building by the means of a tower crane. They have a bottom opening to allow concrete to flow out of the bucket when in-place.

Technical Specifications

Capacity	0.25 cum to 4.0 cu mtr.
Sterring Shaft	32 mm
Model/Type	Cone Type
Cone	10 swg thick MS Sheet
Techniques	Rolled

Salient Features

- Control panel for easy operation of the batching plant by single operator
- Electronic load cells weigh batching with digital display
- Water dosing system for pre determined quantity of water into the drum, with digital display and electric water pump
- Resistivity to adverse conditions
- High durability
- High performance
