

# Drum Sieve

DIMENTION(L*W*H)	MOTOR	WEIGHT	CAPACITY(PRE*POST)	SIEVE DIMENSION
2000*1200*1720 mm	1.5	500	40TPH - 15TPH	950 mm
2300*1500*2130 mm	2.2	700	80TPH - 30TPH	1250 mm

Drum sieve machine can be used as pre-tbl\_serviceer or main tbl\_serviceing machine for grains and cereals to separate coarse impurities, such as straw particles, string, paper, pieces of wood, leaves etc. **Industrial Drum Sieve Machine** relieves downstream machine and conveyors. It also protects them against operating faults and damages to other machines. Drum sieving machine can be used for grains like rice, wheat, maize, all pulses and many more. This machinery is also suitable for performing certain tbl\_serviceing operations.

## Salient Features of Drum Sieve Machine:

1. Versatile and can be used for all kinds of intakes.
2. Serves to separate coarse impurities.
3. Relieves on downstream machines and conveyors.
4. Protects other machines against operating faults and damages.
5. Also suitable for performing certain tbl\_serviceing operations.
