

Pulse De-Splitter

Pulse or Dal de-splitter machinery is used in splitting and dehulling of various pulses. **Industrial Pulse De-Splitter Machine** is also used in making guar split. Machine works on the principle of shearing force on the pulses seeds. Splitting of seeds with or without skin can be done with this machine. It can be attached with aspiration system to separate the hull of the seeds. Extent of splitting is easily adjustable.

Salient Features of Pulse De-Splitter Machine:

1. High splitting efficiency.
2. Compact steel construction.
3. Low power consumption.
4. Splitting efficiency is adjustable to get more output with less broken.
5. Easy installation.
