

# Onion Topper

The Allround onion topper is a machine designed to top the tail of onions. This is done by rotating knives under vibrating sieves. The vibrating sieves causes the tail of the onions to fall through the sieves. It is then cut off by the knife. The sieves of the machines are very easy to change because of the 'quick-lock' system. The onion topper machine is designed to be extremely produce-friendly, and safe to use. The knives and propeller must be cleaned daily.
