

Gate Valves

We offer to our clients a wide assortment of Gate Valves, which are available in different pressure ranges, sizes and designs. These are specifically designed to be used in pulverized coal mills and in coal-fired thermal power plants. We provide a unique feature of the uni-directional hard faced full port bore in our gate valves which enables these to easily withstand the erosive flow of pneumatically conveyed fine coal to the boiler.

Flanged End Gate Valve

- Material IC / CS / CI / SS
- Type Flanged End
- Brand Racer
