

# Screw Conveyor

Along with other material handling equipment, we provide our clients with Screw Conveyors of optimum quality standards. Designed and manufactured to ensure durability and efficient performance to the end user, our screw conveyors are reckoned for low maintenance cost. These equipment are manufactured using mild steel plates, and are useful in the efficient functioning of the oil mill plants. Offered in various sizes, capacities and specifications, these screw conveyors find extensive usage in the feeding of seeds and cakes. Some of the other details are as follows:

- Sizes range from 7 inches to 15 inches.
- Customization facility is also provided.
- The screw is enclosed in a flexible or rigid plastic tube, or a rigid steel tube, which is driven by an electric motor.
- Screw is normally located at the discharge end of the conveyor.
- A removable clean-out cap is placed to cover the intake end of the conveyor tube, enabling the conveyor to rapidly empty and flush.
- Also helps in the disassembling and washing down of the components.
