Pressure Vessels

What is pressure vessel?

The pressure vessel is a closed rigid container especially designed to hold gases and liquids at a pressure different from the ambient pressure. Its caps are securely fitted to the heads. Our pressure vessels are available in various size and shapes used for various industrial purposes. These are made of carbon steel and stainless steel and can be manufactured in the customized forms as per the required specifications. We pressure vessels to many food, chemical and pharmaceutical industries.

Design Standard/Codes:

- » ASME VIII with or without U stamp
- » PED
- » AD Mark
- » Specific standard as per customer requirements.

Material

Carbon Steel
Stainless steel
Duplex - UNS S31803
Alloy Steel
Hast Alloy
Exotic Materials

*Other MOC can be offered as per customer requirement. For the same please contact New Field.

Technical Features:

- » Default Paragraph Font; footnote text*
- » Available up to 45mm shell thickness for all MOC
- » Single Equipment Up to 60 ton Weight
- » Dimension up to 6 meters Diameter & 15 meters Length#
