

Downdraft Table

A downdraft dust collector captures dust from the region around a dust-producing tool that does not have a shroud. Where source capture is not practicable or in combination with source capture dust collection devices, a downdraft dust collector is advised. The downdraft tables are developed with ergonomics in mind, and they provide a quick, maintenance free way to maintain machined components dust-free for further processing. The downdraft dust collector includes a blower for dust removal leaving the operator's hands free to grasp the part and air gun. Below the table, dust particles are collected.

System Type

- ✓ Filter Type - Cartridge
- ✓ Air Capacity - 4500CFM-20000CFM
- ✓ Air Speed - 18M/sec
- ✓ Filter Area - 25Sq.m -150Sq.m
- ✓ Air-Flow Direction - Cross-Flow Type

Advantages

- ✓ High extraction capacity
- ✓ Optimal safety
- ✓ Quiet operation
- ✓ A solution for every situation
- ✓ Fast filter removal
