

Shredders

RDF shredders are used for reduction in volume of obtaining uniform cut sizes in bulky wastes like paper reams and & wastes, auto parts like bumpers & tyres, appliances like refrigerators etc. It is also used for shredding metals like aluminum, copper, scrap iron, plastics and other municipal and industrial solid wastes. Shredders find application in waste management units and recyclers like eco-centers, landfills, wreckers etc. Shredders are available in wide range to suit varied solid waste treatment requirements and raw waste material types.
