

Rubber Gasket

Inter national gasket company is manufacturing custom design rubber O-ring or gasket. Rubber Gaskets are mechanical seals that are required to fill in the space between two mating surfaces while under compression. They help prevent leakages that might arise on account of regulates between the surfaces. This highly effective property has resulted in wide use of gaskets in fields like petroleum refining, chemical plants, shipping, electric power, pharmaceutical etc.

Undertaking all processes in-house, from tooling to manufacturing to Quality Control to dispatch, Western Rubbers' provides the flexibility of custom designing your gasket in any color, size, grade, or hardness, in order to meet your current as well as future sealing requirements.
