

Duplex Strainers

Duplex strainers remove damage causing particulate matter from the process media, and never have to be shut down for cleaning. The line can run continuously. When one strainer basket becomes full, flow is switched to the other. The first basket is removed, cleaned and is ready for use again. Some basket filters are 'temporary' and are intended for start-up use only. In-line strainers are positioned with the basket parallel to the line of fluid flow. It can be manufactured in casting / fabrication as per requirement .Duplex Strainer can also be available with steam jacketing for fluid like (L.D.O. / H.F.O. Bitumen etc.)

Size Range :-

- In casting (½" to 4")
- In fabrication (1" to 6" with 3 way ball valve design)
- (8" to 40" with disc & spigot changeover)
