

## Cylinder Liner

Our high-quality cylinder liner sleeves function as the inner wall of a cylinder thus forming a sliding surface for the piston ring while retaining the lubricant within. The combustion heat transferred through piston and piston rings is turned into a coolant, the actual application of these coolants is in heavy vehicles like trucks and buses. Quintess International produces large quantities of semi-finished as well as fully finished cylinder liners to cater to the needs of various users in local and export markets.

Our high-quality cylinder liners are used by a wide range of industries, including motorcycles, scooters, automobiles, commercial vehicles, diesel engines, tractors, industrial and agricultural engines, air compressors, and other moly hardliners. All of our cylinder liners are designed to fulfill the needs of race and high-performance engines.
