

Cylinder Sleeve

Cylinder sleeves which are used for quick repair of damaged worn cast iron and aluminium engine blocks. Our Cylinder sleeves help save the block in case of excessive taper wear, crack, scored and damages. In order to prevent wear, we produce centrifugally cast cylinder sleeves instilled with desired strength across the cylinder. At Quintess International these are manufactured using the latest technology to provide flawless bore which is entirely significant to boost the performance of your engine.

Aside from that, cylinder sleeves are available for a variety of diesel, marine, tractor, and automotive engines, as well as their models. These sleeves were created with the most cutting-edge technology available, and Quintess International is offered at very competitive prices. Our Cylinder Sleeves are reasonably priced in the market and provide excellent performance.
