

Self-Cleaning Strainers

Femco self-cleaning strainers are designed for continuous operation with removal of dirt, slug, and debris in water as well as some oil applications. With its self cleaning capability, it can reduce down time as well as increase efficiency in filtration each time after cleaning. This can be controlled either manually or automatic PLC controlled.

These strainers can accommodate large level of customization as per custom requirements along with several accessories to suit for different project requirements.

In this category we also manufacture rotary strainers with auto clean systems. It can be designed for various flow and pressure requirements.
