

Wet Scrubber

Wet Scrubber for fumes, mist and suspended dust eliminated using wet scrubbers. Wet scrubbers collect particulate & eliminates gaseous pollutants by direct contact with liquid. These types of collectors have the ability to handle high temperature and light dust laded gases.

There are wide range/types of scrubber. The most common scrubbers are

Static wet scrubbers

Spray tower

Venturi scrubber

Cyclonic spary scrubber

Packed bed column

Depending upon the particle to be collected and gas to be absorbed the scrubber is designed. We design high efficiency scrubber with minimum maintenance, low liquid consumption and higher entrapment of mist at out let. Wet Scrubber can be constructed out of steel, stainless steel, PP-FRP, steel rubber liner etc depending upon to the gas be handled & temperature.
