

## Pumps

Unideritend has entered in the list of most successful leader in supplying and manufacturing pumps for various engineering industries locally and internationally. With the cooperation and collaboration of its hardworking teams, UDI has achieved a landmark in the global market for its epic role of supplying and manufacturing pumps to the local and international market. Numerous pumps have been designed and on demand of the customers, are exported globally. Some of the renowned types of pumps manufactured and supplied by Unideritend include Casings, Critical Impellers (with both types of open and closed impellers that further extend the list by including Radial Flow Types, Glands, Covers, Bodies, Diffusers, and many others).

There are some other sorts of pumps that are also designed, manufactures and supplied that are produced for various high end appliances and these appliances include the most renowned like Power Generations, Pharmaceuticals, Food, Oil, Chemicals, Fertilizers, and many other heavy industry appliances. UD's ability to cast these parts in a variety of alloys, both Ferrous & Non Ferrous including High integrity material grades like CA6NM. CD4MCu, Duplex Stainless Steel & some of the Exotic High Nickel & Chromium Alloy grades along with meeting requirements of Standards like PED/97/23, AD Markblatt 2000, API & other equivalent ones, make them a Unique Supplier to Pump Manufacturers.

When it comes to manufacturing pump castings, our main focus is to manufacture top quality castings including pump castings, pump impeller casting, pump impeller design, pump impeller sizing and last but not the least the water pump impeller ferrous and non-ferrous castings.

We have a quality assurance team here at UDL that not only assures the product is manufactured well within the deadline, but also ensures that the product or item is ISO 9001 certified and meets all the standards employed there within the best thing is that whenever you decide to proceed further with your take on top quality castings including pump castings, pump impeller casting, pump impeller design, pump impeller sizing and last but not the least the water pump impeller ferrous and non-ferrous castings, you will find UDL pretty professional.

When it comes to specialization and quality assurance, we at Unideritend have the best quality assurance and testing teams. Our teams specialize and are equipped with new testing equipment to test every single piece that we manufacture. In this way, we totally assure that the parts, tools, equipment and any other accessories that we are manufacturing should comply with the ISO 9001 quality assured standards. The volumes we focus at are normally fifty to five lakh pieces per month, thus ensuring that we can meet the needs of any engineering industry on regular or monthly basis. We also provide design assistance as we have a team that assists with technical design at casting concept stage. In addition, we also provide assistance regarding concurrent engineering, CAD capability for tool design interface, compound radii, undercuts, weight reduction holes, thin wall casting, and deep cores. Therefore, we would be attending you as one of our very special customers at UDL.
