

Valves

Industrial pumps and valves are the integral components for fluid transport in the industrial sector. Pumps mechanically displace large amounts of fluids from one place to another. Valves are used to regulate the flow of fluid in a particular place by opening, closing or partial obstruction of the fluid. The fluid handling process varies from one industrial sector to another. Due to this, there are several types of pumps and valves designed for industrial use, each with a specific function and purpose. Choosing the right kind of industrial pumps and valves most suited for your specific need can be a little tricky if you are not familiar with the right dealer who can provide you with the best products.

When it comes to dealers, no one understands your needs better than Unideritend. We are one of the prominent manufacturers of the finest quality industrial pumps, valves and valve castings in India. All our products integrates over 40 years of engineering excellence, and experience. Here are some reasons why you should order your pumps and valves from Unideritend:

Design expertise: We specialize in manufacturing a wide variety of pumps and pump parts such as casings, critical impellers, diffusers, glands, covers and bodies of all kinds of pumps that can be utilized for all kinds of industrial applications. All of our pumps and their corresponding parts are all made of the finest quality, variety alloys such as ferrous, duplex stainless steel, nickel and chromium. Our valves and valve castings are also perfectly suited to endure the test of time. They are all carefully engineered to withstand all sorts of pressure tests and corrosion tests. Some of the common valves that we specialize include annular valve, diaphragm valve, fixed cone valve, Gate valve, Needle valve, pinch valve, ball valve, butterfly valve, plug valve, tilting disk check valve and swing check valve

Quality assurance: All of our designs meet international standards PED/97/23, AD Markblatt 2000, API, ISO 9001& other equivalent ones. We also have a highly stringent quality assurance team who test every piece that is manufactured with the latest technology.

Design assistance: At Unideritend, we aim to provide our customers with the very best service possible. As a result, we have a specialized team of experts who can help you with design and set-up. Our team of experts are well-equipped to assist you in developing a casting design concept, concurrent engineering, CAD capability for tool design interface, compound radii, undercuts, weight reduction holes, thin wall casting and deep cores. We also provide repair and maintenance services.

Large number satisfied clientele: Our products are sold locally as well as internationally. Over the years, we have forged excellent relationships with all of our clients. We have a large clientele from different industrial sectors. Our clients are very important to us. So we make sure to pay special attention to each of their individual needs.

Excellent R&D: We aim to better ourselves with every step we take. With this in mind, we have paid great attention to develop an excellent R&D facility. Over the years, our R&D has managed to achieve an excellent reputation for their development of unique and indigenous binder formulations, different kinds of waxes, ceramic filters and other stucco materials.

With a great portfolio of excellence, experience and quality behind us, we are sure that we can provide you with the best products and services available in the country. So, if you are looking for premium quality industrial pumps, valves and other spare parts at an affordable price, do check out our products. You will not be disappointed.
