

## Duplex Strainers

Our range of Duplex strainer is mainly used for uninterrupted flow of process fluids. It has Two Basket Strainers and Two 3-way Ball Valves. The flow path is changed over by manually operated Ball Valve. The clogged screen of one strainer is removed from housing for cleaning and refitted for next cycle. Meanwhile the process fluid passes through standby strainer uninterrupted. These can be easily replaced and have a leak proof design with bubble tight sealing as in the case of ball valves.

### Specification

- Pressure up to 30kg/cm<sup>2</sup>
- Temperature up to 300 Celsius
- M O C CS,SS 304/316/
