

## GM Gate Valves

GM gate valves are designed mainly for on-off and isolation services in systems with high content of suspended solids. The GM gate valves are especially beneficial for handling slurry, viscous, corrosive and abrasive media. The valves have a minimised pressure drop in fully open position, they are easy to actuate, they have a relatively low weight and are cost effective.

MOC Body, Bonnet & Nut :	GUNMETAL
Wedge :	Gunmetal
Spindle :	Brass   G.M.
Gland Packing :	Graphited   Asbestos
Ends :	Screwed   Flanged
Size :	1/2" to 4"

### Hydro Testing Pressure

Body	Seat
15 KG	10 KG
