

## Conical Strainers

Our Company designs, manufactures and supplies excellent Temporary Strainers or Conical Strainers, Conical Filter Strainers and Steel Conical Strainers, which are mounted between two flanges as permanent protection of pipelines and plants. We design and develop world-class stainless steel Conical Strainers in fully welded design.

They are made from perforated plate or perforated plate with fabric filter medium related to the filter rate. The compact design of Strainers guarantees a minimal space requirement. These Temporary Strainers are often applied when a new plant is put into operation or by repairs of existing plants. We offer these products at highly customized prices.
