

# Container Net

We are a leading company specializing in the business of manufacturing and supplying Container Net. It is used as a safety net inside the doors of a shipping container to secure loose items during transit. We use premium quality nylon and PP materials, procured from trusted vendors to manufacture this net. The net can withstand harsh environment and protect the containers from high impact. We make available this Container Net for clients in different specifications as per their requirements.

## Container Net

We produce **Cargo Nets** of different specifications and sizes as per customers requirement. These are used to restrain cargo in containers, vans etc. Our Web Cargo Nets are considerably more flexible, lightweight and compact than wire or manila rope nets and have a mesh opening size of approximately 6.25 inches square. Commercially produced Cargo Nets and non-standard sized nets are also readily available. Cargo Nets must be square to function properly.

## Material

All our dunnage bags IN-LINER are made of a specially extruded poly-ethylene (PE-mixture) with the guarantee of a perfect tightness even under high pressure. For the OUT-LINER we use layers of special extensible kraft paper with a very high TEA to match with all applications.

Only kraft paper from the best quality and tear force will be used for the airbag production process and that guarantees the best possible performance.

# Features

## **Features:**

- UV resistant
- Controlled elongation
