

Cyclone Separators

[Unimax manufactures high efficiency cyclone] separators in capacities from 500 cfm to 15000 cfm [which has the capability] to remove moderate to large size particles from the air stream. These are widely used in applications which require high efficiency large diameter collectors where special gas drawing problems are involved such as:

- High dust loading.
- Severe abrasion.
- Elevated temperature.

Our separators can be used in conjunction with another dust collector or after filter.
