

Ball Mill

Ball mill is an efficient machine for fine powder grinding and key equipment for grinding after the crushing. There are two ways of ball mill grinding: the dry way and the wet way. It is used to grind many kinds of mineral ores and other materials, or to select the mine. Ball mill is also widely used in the manufacturing industries, such as Biotechnology, Cement, Silicate, Fertilizer, Ferrous Metal, Non-ferrous Metal and Glass Ceramics and can be used for the dry and wet grinding for all kinds of ores and other grindable materials. It has a capacity of 10 litres to 10000 litres .Useful to any continuous process industry where automatic controlled flow of material is required.
