

## Flap

Our flaps are designed and developed to withstand heat generated till the rims due to rolling resistance.

- Our flaps have been designed with unique compounding to meet specific requirements of Customers after field testing . We can readily supply Flaps Made out of Natural Rubber (N.R) & EPDM ("E"-ethylene,"P"-Propylene, "D"- Diene and "M" for poly methylene )
- EPDM flaps are widely used as Curing Flaps in the Tyre Retreading Process .
- Our EPDM Flaps can be used as regular Flaps in Trucks and Buses which gives higher Mileage and double the service compared to the Conventional Flap.
