

Rotary Separator

Circular movement of the sieves ensure efficient separation with big capacity. Suitable for any kind of grain and for all products of the cleaning plants. Smooth operation since motor swings along with sieves box. Optimum capacity for the space occupied. V-Belt drives the fly wheels. Sieve cleaning by rubber balls. This ensure good tightening of connection and easy removal and replacement of sieves. Minimum attendance needed.

Features:-

- Circular movement of the sieves ensure efficient separation with big capacity.
- Suitable for any kind of grain and for all products of the cleaning plants.
- Smooth operation since motor swings along with sieves box.
- Optimum capacity for the space occupied.
- V-Belt drives the fly wheels. Sieve cleaning by rubber balls.
- This ensure good tightening of connection and easy removal and replacement of sieves.
- Minimum attendance needed.
