

Slat Conveyors

Facilitating the transporting and moving of materials or objects in the heavy weight from one place to another in industrial and manufacturing establishments as well as cafeterias and food service facilities, Slat Conveyors, designed by Precession Conveyor Systems from high-quality belts made out of Delrin or fine quality plastics, and electric motors and strong chains, not only move the objects with great ease but also minimizes the labor cost in terms of busing and washing of utensils in a big food service venture.

We, being a leading manufacturer and exporter of Slat Conveyors, have been serving the Indian and international clients for many years. Focused onto equipment design keeping ergonomics in consideration, we pay importance to principles pertaining to efficiency, weight, standardization, operational safety, speed and capacity so that we can come up with Slat Conveyors which fulfill application and requirement in a satisfactory way.

Notable Attributes Of Machine

Transporting the material as swiftly and smoothly as possible

Offering operational control to enhance the function

Keeping the movement simple and straight

Lowering down turn-around time and energy consumption
