

## Conveyorss

A conveyor system is a common piece of mechanical handling equipment that moves materials from one location to another. Conveyors are especially useful in applications involving the transportation of heavy or bulky materials. The flexible, modular design makes an ideal selection for conveyance in cleanroom environments, automotive component assembly, medical device and instrument assembly, microelectronics production, and semiconductor applications.

With conveyors available for low to high range load capacities paired with bidirectional operation and compatibility with a variety of auxiliary devices, Jolly Industries meets your most challenging production needs.
