

Demineralization Plants

We offer DM Plant that is assembled using two bed water deionizer and helps in eliminating minerals from water to purify it. These plants consist of FRP/MS Rubber lined pressure vessels that are connected in the form of a series using internal fittings. The first unit of these plants has high capacity, strong acidic cation that replaces positive ions of salt with hydrogen ions, resulting in the formation of varied respective acids. Clients can avail these plants from us at market leading prices.
