

Magnetic Lifter

BEST A GRADE COMMERCIAL & INDUSTRIAL MAGNETIC LIFTER DEALER IN TAMIL NADU, INDIA

With our years of experience, we are engaged in providing a superior quality range of Permanent Magnetic Lifter Dealers in India. This machine is manufactured using excellent quality components with the help of advanced technology. The offered machine is checked on various quality parameters, which ensure its high performance. This machine is

used for lifting steel plates, blocks, press molds, iron blocks and other Magnetic Lifter material. Easy to operate and safe to handle, we offer this machine in diverse specifications at market leading price to the clients.

India Chain and Slings individual that specializes in the sale and distribution of magnetic lifters, which are devices used for lifting and handling ferromagnetic materials, such as steel plates, rounds, and sheets. We offer a wide range of magnetic lifters with different lifting capacities, sizes, and designs.

Magnetic lifters are designed to use the principle of magnetism to lift and move ferromagnetic materials. We consist of an electromagnet and a control unit that allows the operator to turn the magnetic field on and off. The magnetic field is generated by passing an electric current through a coil of wire, which creates a magnetic field that attracts ferromagnetic materials. This allows the operator to lift and move the materials without the need for slings or chains.

India Chain and Slings will have a team of experts who can help customers select the right product for their specific application, provide technical support, installation instructions, and maintenance advice. We also offer our custom fabrication services, such as cutting and splicing wire rope to meet specific lengths and configurations. India Chain and Slings also ensure that the magnetic lifters they sell meet the industry standards and are safe for use.

Magnetic lifters are widely used in different industries, such as manufacturing, construction, transportation and more, as they provide an efficient and safer alternative to traditional lifting methods.

Our Product Specifications

High lifting capacity, Does not require an external power source and can be just handled by ON/OFF switches and Surface condition plays the major role in lifting, which is suggested to be flat and clean ferrous material. These lifters eliminate the requirement of slings, clamps or various other holding devices because of a high magnetic force. Offered lifting devices are provided with magnificent weight capacities.

Our Product Features

Easy to use

Hassle free performance

User-friendly controls

Longer working life

Highly resilient design

Rust proof finishing

Used for lifting & handling of steel sheets & blanks from stacks & press machine
