

Cartridge Heaters

- Cartridge heaters also called as pencil are involved in heating of dyes, moulds, platens, sealing & packaging machines, medical equipments & food processing industries.
- Keeping in mind the breakdown cost & time involved, these heaters are designed & manufactured using genuine quality materials with the intention of providing optimum life & uniform heating.
- They can also be provided with built in thermocouple for proper temperature controls.
- These heaters are supplied in S.S or Brass and can be provided with different types of connections & end terminations to suit requirements.
- They can also be made according to end user's requirement & application.
- When ordering kindly provide Outer Diameter (\varnothing), Length, Wattage, voltage, material type & end terminations.
- We also do have in-house set-up to manufacture High Watt Density Cartridge Heaters.
