

Coil Heaters

- These heaters are spiral in shape and as a result of this peculiarity; they make a proper contact with the surface to be heated, in turn providing uniform heating which helps to gain higher productivity with long lasting life.
- They can be gun metal or aluminum casted & machined to meet required dimensions.
- They come with built-in thermocouple for controlled heating avoiding premature failures.
- These heaters can be made in circular, square or rectangular profiles as required.
- Specifically used in plastic industries on hot runner moulds & nozzles.
- When ordering kindly provide drawings, Inner Diameter, wattage, voltage, Heater profile, Material of casting if needed & end termination.
- They can be made as per end user's application.
