

Perforated Sheet

We are among the celebrated names in the industry for manufacturing and exporting Perforated Sheet, which is remarkable in durability and made from high quality stainless steel. It is used in filters of combustion engines in automobiles, ventilation of food grain depot and insulation of rooms from sound. The product is resistant towards corrosion and rusting and can be customized for meeting with the requirements of the customers.

International Wirenetting Industries a wide range of perforated metal sheets punched in mild steel, galvanised, aluminium, stainless steel and special alloys. Standard specifications can be supplied as per your requirement and dispatched within 3-4 days. International Wirenetting Industries Stainless Steel perforated metals are used extensively in the engineering, food processing, building, agricultural, nuclear power and petrochemical industries and many others.

Perforated materials are used in a number of different applications for a variety of reasons. Used mostly as screens, filters, shields, and guards, perforated materials can control the passage of air, liquid, light, solids, heat, electromagnetic waves, and sound waves.

With these abilities, perforated materials has applications such as clothes washer and dryer drums, speaker covers, automotive grills and exhaust components, airplane engine silencers, grain dryers, microwave ovens, computer cabinets, and countless others. Other applications are aesthetics in architectural and design applications such as facades, fixtures, and privacy panels.
